UCS-CHR24V155W

Combined Power supply & Battery Charger

Data Sheet

INTRODUCTION

UCS-CHR24V155W is a combined charger and power supply with dedicated outputs for both charging and power supply. With a large input range 85~264VAC it suits most applications requiring a combined power supply and charger in a small form factor.

UCS-CHR24V155W charges the lead acid battery by floating charge. Floating charge enables the power supply to determine where the watts are required instead of a fixed ratio between power supply and charger.

When mains power fails UCS-CHR24V155W automatically switches to feed the application with battery supply uninterrupted. (UPS function)

Potential free contact set for Mains missing & Battery low.

UCS-CHR24V155W Features.

- Output for AC mains failure.
- Output for battery low voltage
- Battery +/- pole reverse connection protection
- Protections for overload
- Protection for over voltage & short circuit.
- Prevent deep discharge of battery.
- Din rail mountable or direct on backplane.

The small form factor and the combination of power supply and charger built into one unit makes the **UCS-CHR24V155W** ideal for remote applications where combined power supply, charger & UPS backup is required.

SPECIFICATIONS

| Input Voltage | 85~132/170~264VAC | |

NOTE

- 1. All parameters are measured at 230VAC input, rated load and 25 °C ambient temperature.
- 2. Line regulation is measured from low line to high line at rated load.
- 3. Load regulation is measured from 0% to 100% of rated load for single output models. For multi-output models, it is measured from 20% to 100% of rated load, and other output at 60% rated load.
- 4. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor.
