DNP3 Configuration/Interoperability Guide for RTU32 DNP3 Slave

DOCUMENT VERSION 1.02, AUGUST 28, 2014

Revision History

Document Version: 1.00
Date: May 23, 2012
Reviser: Nils Dilau Sørensen, Brodersen A/S

- Original release.

Document Version: 1.01
Date: June 7, 2012
Reviser: Nils Dilau Sørensen, Brodersen A/S

- Functionality for FC 13&14 added.

Document Version: 1.02
Date: August 28, 2014
Reviser: Nils Dilau Sørensen, Brodersen A/S

- Functionality for Object Group 11, 42 added.

Table of Contents

1 Introduction

The purpose of this document is to describe specific configuration and interoperability information for an implementation of the Distributed Network Protocol (DNP), Version 3.0 using Brodersen RTU32 DNP Slave Driver. This document, in conjunction with the DNP 3.0 Basic 4 Document Set, and the DNP Subset Definitions Document, provides complete information on how to communicate via the DNP 3.0 protocol.

This implementation of DNP 3.0 is fully compliant with DNP 3.0 Subset Definition Level 3, and contains significant functionality beyond Subset Level 3.

2 DNP V3.0 Device Profile

The following table provides a "Device Profile Document" in the standard format defined in the DNP 3.0 Subset Definitions Document. While it is referred to in the DNP 3.0 Subset Definitions as a "Document," it is in fact a table, and only a component of a total interoperability guide. The table, in combination with the Implementation Table provided in Section 3 (beginning on page 5), should provide a complete configuration/interoperability guide for communicating with a device implementing Brodersen RTU32 DNP3 Slave Driver.

Vendor Name: **Brodersen A/S**

Device Name: **RTU32**

Highest DNP Level Supported:	Device Function:
For Requests: **Level 3** For Responses: **Level 3**	☐ Master ☒ **Slave**

Notable objects, functions, and/or qualifiers supported in addition to the Highest DNP Levels Supported (the complete list is described in the attached table):

For static (non-change-event) object requests, request qualifier codes 07 and 08 (limited quantity), and 17 and 28 (index) are supported. Static object requests sent with qualifiers 07, or 08, will be responded with qualifiers 00 or 01.

16-bit, 32-bit and Floating Point Analog Change Events with Time may be requested.
Floating Point Analog Output Status and Output Block Objects 40 and 41 are supported.
Sequential file transfer, Object 70, variations 2 through 8, is supported.
Device Attribute Object 0 is supported.
Output Event Objects 11 and 42 are supported.

3 DNP V3.0 Implementation Table

The following table identifies which object variations, function codes, and qualifiers the Triangle MicroWorks, Inc. DNP 3.0 Slave Source Code Library supports in both request messages and in response messages. For static (non-change-event) objects, requests sent with qualifiers 00, 01, 06, 07, or 08, will be responded with qualifiers 00 or 01. Requests sent with qualifiers 17 or 28 will be responded with qualifiers 17 or 28. For change-event objects, qualifiers 17 or 28 are always responded.

In the table below, text shaded as 00, 01 (start stop) indicates Subset Level 3 functionality (beyond Subset Level 2).

In the table below, text shaded as 07, 08 (limited qty) indicates functionality beyond Subset Level 3.

Note 1: A Default variation refers to the variation responded when variation 0 is requested and/or in class 0, 1, 2, or 3 scans. Default variations are configurable; however, default settings for the configuration parameters are indicated in the table above.

Note 2: For static (non-change-event) objects, qualifiers 17 or 28 are only responded when a request is sent with qualifiers 17 or 28, respectively. Otherwise, static object requests sent with qualifiers 00, 01, 06, 07, or 08, will be responded with qualifiers 00 or 01. (For change-event objects, qualifiers 17 or 28 are always responded.)

Note 3: Writes of Internal Indications are only supported for index 4 or 7 (Need Time IIN1-4 or Restart IIN1-7)
